

Integra

**Your obsolete antenna stock will
no longer be a burden for you
and the planet**

With Integra you can upgrade obsolete antenna stock instead of scrapping

The need for flexibility

If only we had a crystal ball. Then we could see the future and avoid this waste. But in reality, predicting long-term network needs is a challenge:

- New spectrum: which frequency and when?
- 5G rollout: at what speed and which sites?
- Site sharing: which sites and when?

Must we simply accept that our current level of waste and carbon footprint is regrettable but unavoidable?

Integra offer an alternative to the antenna waste

- The modular design - allows huge number of antenna configurations
- Our 4 European upgrade facilities
- More than 20 antennas already in our portfolio

Cut your carbon footprint by 50%

To address the issue of waste, carbon footprint and network evolution, we present Integra, the world's first antenna upgrade programme:

1: Ship back obsolete antennas to us

3: We return upgraded antenna to your warehouse

2: We upgrade your antenna to the new configuration

Why you should go for Integra ?

Save carbon emission - reuse minimum 50% of the existing antenna

Save money - upgrading is cheaper than buying new antenna

Shorter lead time - upgrading is faster than building new
